(54) Title: A HEDGE CUTTER

(57) Abstract: A hedge cutter (1) comprising a main body (2) and a cutting head (5). The cutting head (5) includes first and second elongate faded members, in which at least one of the bladed members (6,7) is adapted to be driven to reciprocate longitudinally relative to the other bladed member (6) to effect a cutting action. The cutting head (5) is also adapted to be fixable on the main body (2) at at least two alternative spaced positions on the main body (2). The hedge cutter (1) also comprises drive means arranged to reciprocate the driven bladed member or members and means for setting a direct or indirect connection between the driven bladed member or members and the drive means when the cutting head (5) is in any one of the at least two alternative spaced positions.
